

Melt blown Fabric Making:

It is purely Polypropylene Plastic which is main and Major filtration medium to filter Dust particles, bacteria and viruses.

Finds applications in Medical / Surgical / common Masks, isolation suits, et-cetera.

Automotive air filters, A/C filters, Water Filters, Air purifiers, Industrial & Engineering purification system, Car Oil filters.....

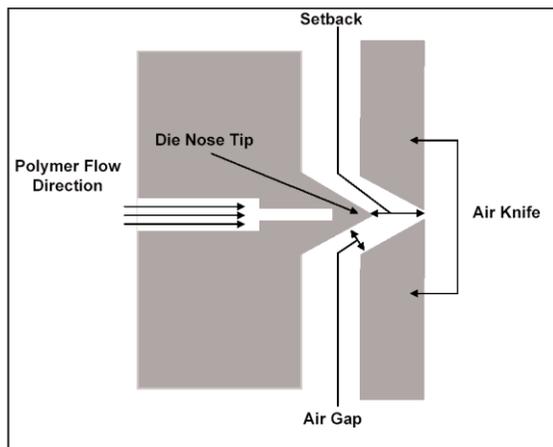

The product can be made in Widths of 600 / 800 / 1200/ 1600/ 2400 / 3200 mm.

Basically, the molten PP material is thrown on belt with pressurized air [ Air-blown] and the fabric is made without Weaving and so is known as Melt Blown.

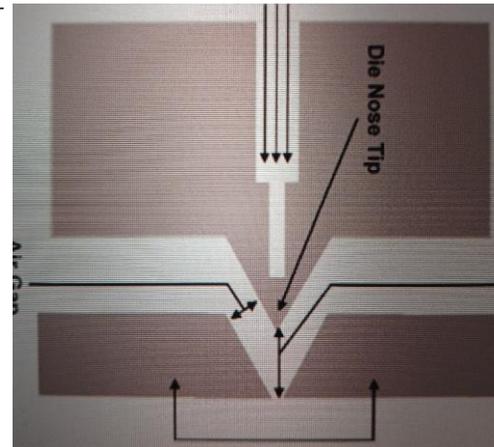

Make high quality and the market is Unlimited.

The fabric is collected on a running belt either vertically or horizontally, of later vertical Die finds more in use.

Horizontal Blowing

Vertical blowing

The business offers more than 250% returns. Must go in for the business. Can offer small to large scale operation.
