

Artificial Rattan ( Cane) furniture making plastic extrusion line:

Such plastic strips can be made in one/two/three/four/ five colors.

Final applications can be Chair, teapoy. Furniture, baskets, woven handicrafts and so on.

The products can be washed with soap and water and needs no maintenance at all, the termite cannot touch it.

The simplest and cheapest version can be a single Extrusion system, with the changes of dies, we can make many varieties and many products can finally be made from just one line.

The raw material can be PVC, PP, HDPE and the machine needs just 15 KW Connected load. The wires to be drawn can be flat, round or moon shaped and can be made 20 to 50 Kgs per hour depending upon the material and shape and size of the product. Within just 5000 Sq Feet of space, we can set this project.
